

Vaginal Symptoms Keep Coming Back?

There may be more than one cause

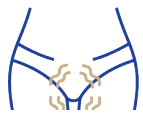

One Swab. More Answers.

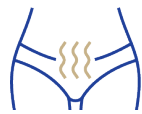

Many vaginal infections share similar symptoms, but they are not all treated the same way.

Burning

Itching

Odor

Discharge

Irritation

A single specimen collection can identify multiple causes of vaginitis.

Why Comprehensive Testing Matters.

Symptoms can overlap

Multiple infections may occur together

Different causes may require different treatment

The same **OneSwab**® may also be used for STI testing.

One Swab. Three Categories.

AEROBIC VAGINITIS (AV)

BACTERIAL VAGINOSIS (BV)

CANDIDA (YEAST) VAGINITIS

Understanding the A B Cs of Vaginitis

A

AEROBIC VAGINITIS (AV)

A different type of infection that can cause inflammation and irritation.

AV can cause:

- ✓ Burning
- ✓ Irritation
- ✓ Inflammation
- ✓ Discomfort similar to BV

MDLs testing looks for bacteria associated with Aerobic Vaginitis, including:

- *E. coli*
- *Group B Streptococcus*
- *Enterococcus faecalis*
- *Staphylococcus aureus*

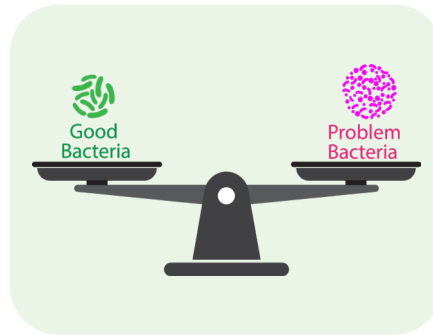

Lactobacillus levels are also reported to help your provider better understand your results.

B

BACTERIAL VAGINOSIS (BV)

BV is the most common cause of vaginal symptoms and is about an imbalance in the vaginal microbiome.

MDLs testing helps providers evaluate the balance between "good" and "problem" bacteria for a more complete picture.

This deeper insight might help:

- ✓ Improve treatment decision
- ✓ Monitor treatment response
- ✓ Understand recurring BV symptoms

C

CANDIDA (YEAST) VAGINITIS

Not all yeast infections are the same. Some yeast species may not respond to common medications.

MDLs testing identifies 5 common *Candida* species:

- *C. albicans*
- *C. parapsilosis*
- *C. glabrata*
- *C. tropicalis*
- *C. krusei*

Knowing the specific species may help your provider choose the most effective treatment for you.

Additional species and fluconazole resistance testing are available when needed.

You Deserve Answers. You Deserve Relief.

MDLs **OneSwab**® platform is designed to deliver accurate, comprehensive results to help your provider personalize your care and achieve better outcomes.

Is this testing right for you?

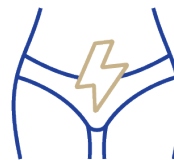

You may benefit from advanced vaginitis testing if you experience:

Recurrent infections

Persistent symptoms

Frequent irritation or discomfort

Symptoms that return after treatment
